

Feed Safety for Food Safety®

**Biochem is a family-owned company
which was founded in 1986.**

Effective feed concepts to support gut health & increase
nutrient utilization.

Biochem Fast Facts.

1986

Based in Germany,
Biochem is a family-
owned company
which was founded
in 1986.

60+

Biochem is present
with 13 branch
operations and a
distribution network
in over 60 countries
worldwide.

280+

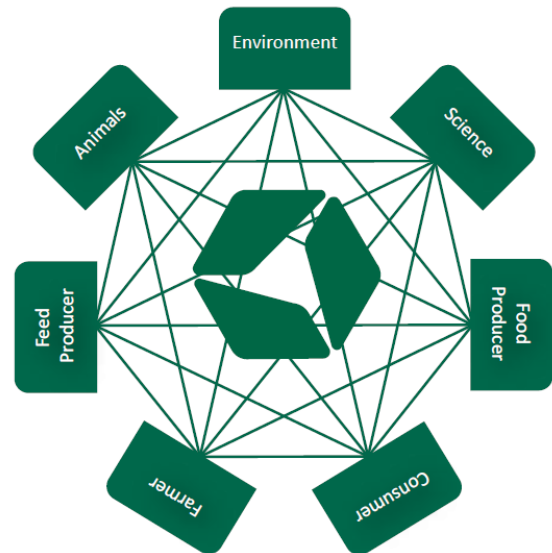

More than 280
employees develop
and market feed
supplements and
additives for animal
nutrition.

Feed Safety for Food Safety®

This has served as our guiding principle since 1986. For more than 25 years, we have been supplying innovative products for efficient and safe animal nutrition. The criteria for developing and expanding our product portfolio is based on the changing needs of livestock, humans and the environment.

Focal point

Our products place us in direct contact with the feed industry, farmers and livestock. At the same time, we are networked with the food industry and committed to supporting consumers and their specific needs. Continuous research focusing on innovative products and concepts conducted by independent, internationally recognized institutes is one of our highest priorities.

Production and distribution

Our portfolio includes additives, premixes and special feed produced in-house, along with products supplied by the world's leading additive manufacturers. This level of flexibility, together with a wealth of experience in product efficacy, enables us to offer innovative, highly effective concepts for all animal species, from fish to ruminants.

Products for all animals

Efficiency, digestibility and environmental protection – these are the key criteria for selecting innovative, technologically-advanced additives and concepts. Our products are formulated to work in perfect unison and ensure healthy livestock development.

Managing gut flora

Biochem products and concepts are aimed at stabilizing gut flora and digestion. This is the key to animal well-being and performance. And these products are capable of so much more. Our probiotics, for example, support digestibility and help reduce feed costs.

From water-soluble products and powders, to pastes and liquids, additives and feed supplements, used separately or in combination: We supply products formulated for every animal species.

Pioneering trace elements

Biochem is backed by years of experience in the development of organically bound trace elements that maximize availability and increase the performance potential of livestock.

This helps ensure compliance with regulations and reduces environmental contaminants – which is especially important for farms with large herds.

Innovating immunology

Immune system development is extremely important for newborn animals. Carefully prepared immunoglobulins, administered separately or in combination with other important nutrients in paste form ensure a healthy start in life. We also supply prebiotics to stimulate the immune system of older animals.

Focus on efficiency

Betaine and enzymes improve efficiency and lower feed costs.

These additives also reduce the need for high-priced feed components. Enzymes improve digestibility, conserve precious natural resources, and help protect the environment.

Minimizing antibiotics

The combination of long-term, need-based use of additives in feed, and short-term, problem-focused use in water, help lower susceptibility to disease and minimize the need for antibiotics.

This is a key issue when it comes to sustainable production of high-quality food products of animal origin.

Efficiently conserving resources

Adjusting the feed to animal needs ensures well-being and best performance. It also takes advantage of livestock genetics.

Efficient utilization of feed is important to Biochem customers – not only in terms of feed amounts and costs. Lower nutrient excretion helps meet strict environmental requirements. Reducing the levels of high-priced raw materials lowers operating costs.

Our objective is to achieve maximum efficiency in animal nutrition. At the same time, we want to keep a close eye on the balance between economy, ecology and safety in animal nutrition and food production. This is the only way to protect the well-being of future generations.

Pathways to Customer – Regional and Global

Suitable solutions for regional and global animal feed issues are important at Biochem. Direct contact with our customers – from Lower Saxony to Africa, Asia, South America and Europe – is top priority.

Worldwide

Lohne is also the hub for the company's production and sales network. Products are distributed from here to markets in 60 different countries across the globe. Fifteen native languages are spoken at Biochem headquarters. When it comes to customer needs, this ensures open communication. All over the world.

Biochem logistics ensure all products are quickly and safely delivered to customers in more than 60 countries.

On site

Sales representatives in Egypt, France, Hungary, Iran, Poland, Romania, Russia, Serbia, Turkey, Ukraine, the Philippines, Indonesia, China and Brasil are not only product specialists, they understand the needs of their specific regions.

This means best customer service, even in remote areas.

On the road

Biochem product specialists go on the road to gain a better understanding of animal nutrition issues and problems in specific regions. This outreach creates the conditions for custom-engineered products and expert support of customer-developed concepts.

Biochem branch offices are located in Europe and across the globe. Product sales are supported by a network of distribution partners in Europe, Asia, Africa and South America. This means product and sales support is always close by – anywhere in the world.
