

Our client is a Clinic for Small Animals located in northern Germany. Patients and their owners can expect a state-of-the-art, future-oriented facility that stands out prominently in the regional market. In a building newly constructed in 2021, the young and welcoming team offers a diverse range of medical services that perfectly complement routine pet care. Following their mission of providing the best and most compassionate care to patients, the use of cutting-edge medical technology in surgery, imaging, laboratory diagnostics, and anesthesia ensures top-tier treatment at the highest level.

A dedicated network of referring veterinarians appreciates the clinic's harmonious blend of high-quality patient care and the empathetic approach of its team. This combination forms the strong foundation for the center's sustained growth and increasing reputation beyond the region.

To meet the growing demand for high-quality patient care, the center is expanding its surgical department. For this newly created position, we are seeking a veterinarian to join as:

Senior Surgeon (m/f/d) for Small Animals

The Role:

- You will be one of the surgical experts within a team of eight veterinarians and fifteen veterinary technicians.
- Your primary focus will be on applied surgery.
- As one of three specialists responsible for complex cases, you will perform challenging surgical procedures.
- Together with your veterinary colleagues, you will ensure comprehensive surgical care, with a particular focus on orthopedic and neurosurgical interventions.
- You will leverage the center's extensive in-house technical capabilities for diagnosis and therapy.
- You will foster strong collaboration with referring veterinarians.
- You will support staff members in developing their surgical skills.
- On a rotational basis, you will be available during daytime on weekends for back-up support.
- Your direct supervisor will be the owner of the clinic.

Requirements:

- You are a veterinarian with several years of specialization in small animal surgery.
- Ideally, you are a certified specialist in small animal surgery or a Diplomate of the European/American College of Veterinary Surgeons. Applicants who are nearing the completion of their specialization and preparing for final exams are equally welcome!
- You are particularly drawn to complex and demanding cases and approach these challenges with enthusiasm.
- Writing referral reports is a well-established routine for you, and you handle this task with professionalism and care.
- You enjoy collaborative case discussions and highly value professional exchange within the team.

The Offer:

We offer you a unique opportunity to take on a key role within a young and ambitious team. With your expertise and innovative ideas, you can expand the clinic's already impressive range of services and actively contribute to its sustainable development. You will have the chance to implement new approaches, maximize potential, and achieve long-term success.

Look forward to outstanding technical resources and medical services of the highest caliber. The modern facility, conveniently located with excellent transport links, provides a contemporary environment that leaves nothing to be desired: thoughtfully designed waiting areas, advanced operating suites, and carefully planned treatment rooms ensure the best possible care for patients.

Moreover, ongoing construction projects aim to further enhance diagnostic capabilities and expand the center's existing capacities.

A particularly noteworthy aspect is that no night shifts are required, as the center does not have a hospital designation. Referrals are driven by the center's high-end diagnostics and its extensive range of surgical procedures.

The location in the north of a vibrant Hanseatic city and its proximity to the coast offer a high quality of life, an attractive living environment, and countless opportunities for both families and individuals.
