efficiency and quality.**

 **Biochem**  
Feed Safety for Food Safety®

## Welcome to Biochem.

We are committed to supporting you by supplying high-quality feed additives for your animals. As a global company, we are networked all over the world – and firmly rooted in our homeland.

Our mission is to focus all of our company's strength and expertise to support you in your daily work. Biochem feed additives are characterized by efficiency, quality and sustainability. From intestinal health, mycotoxin management, feed safety and nutrient efficiency to immune stimulation – we offer solutions for every animal species, every production segment, and every climate zone.

We serve as your trusted partners when it comes to animal nutrition and animal health. With more than 280 experienced employees from 30 nations, we stay in close touch with you – wherever you are.

## Feed Safety for Food Safety®.

We believe that animal health and well-being benefit us as humans. That's why we pay close attention to safe animal nutrition and invest a great deal of energy and resources in our research.

We are in constant contact with farmers, the feed industry, universities and veterinarians. Because this is the best way to develop products that ensure the welfare of your animals, meet the needs of your farm, and respond to changing markets.

*„We are committed to optimal animal nutrition and sustainability from the very start.“*

Eckhard Thölke,  
CEO and Founder

# Into the future with a clear vision.

We set the highest standards for ourselves. And do our utmost to achieve maximum efficiency in nutrient utilization. At the same time, we take responsibility for the world in which we live. That's why we strive for efficiency with sustainable, safe and holistic animal nutrition concepts.

## Efficiency

Making sure the feed is optimally adapted to your animals enhances their well-being and performance. Our mission is to ensure you reach the full performance potential of your livestock. By improving feed conversion, lowering your operating costs, and reducing nutrient excretion. We can't think of a better way to save money and protect the environment.

## Sustainability

The natural resources required for many raw materials are limited. At the same time, essential nutrients are often insufficiently utilized by the animals and large quantities are excreted. That's why our additives and concepts are formulated to improve nutrient uptake and utilization. The result: high-performing animals, conservation of limited resources, lower operating costs, and less environmental pollution.

## Quality

Feed plays a key role in food safety. That's why we pay special attention to the quality of our products. Biochem concepts are thoroughly tested by independent institutes. This helps us ensure optimal animal nutrition – and the high quality of food on your table.

*„Our goal is to support our customers' success – with the highest quality and a full range of products.“*

Dr. Alexander Grafe,  
CEO Sales

# A full range for your specific needs.

The Biochem product portfolio is based on three principles: Efficiency, quality and sustainability. Our range includes everything from additives, premixes and feed supplements produced in-house, to products from the world's leading additive manufacturers.

## All kinds of products for healthy animals

Depending on the species and environment, husbandry and conditions, each animal has its own special needs. We offer the right concept for the health and performance of every animal, age and requirement. From powders, pastes and liquids, to additives and feed supplements used separately or in mixes, we supply a full range of products to meet your needs.

### Intestinal health management

Stable intestinal colonization and digestion is the key to animal welfare and performance. Biochem supplies products to specifically meet these requirements. Our pro- and prebiotics support the digestibility of the ration – and lower your feed costs.

### Performance assurance

High-performing animals require special care – especially when it comes to trace and macro elements. We rely on more than 30 years of experience in development and application in this field. Our organically bound trace elements ensure healthy animal nutrition and enable the resource-saving utilization of essential micronutrients. And our highly developed mycotoxin binders protect animals from clinical and subclinical poisoning or loss of performance.

### Immune defense

Newborn animals are particularly sensitive. Immunoglobulins offer them the most natural form of protection. This is why we produce our colostrum powder from this high-quality natural product. We have also developed highly efficient immunity-enhancing products for older animals.

### Feed cost reduction

Rising raw material prices make cost management all the more important. This is where our betaine and enzyme products play a key role by increasing nutrient utilization and improving digestion. Lower feed volume, reduced costs and less environmental pollution are all good reasons to choose Biochem.

### Reduction of antibiotics

We are working hard to reduce the general use of antibiotics. After all, this is in everyone's best interests. We need sustainable solutions for the future – not only for the animals but also for humankind and our natural environment. This is why we develop preventative farm concepts. We help veterinarians and farmers reduce the use of antibiotics and keep their animals healthy.

*„We supply a complete range of products for all animals, from aquacultures, to livestock and pets. Our customers rely on Biochem.“*

Marika Ayecke-Thun,  
Head of Product Management,  
Dietary Feed Supplements

## Our standard: Highest quality. Our approach: Continuous research.

We live in an era of change. New requirements and needs, consumer preferences and laws demand modern-day solutions. This is why we invest a substantial amount of energy and resources into scientific research. Our objective is to find solutions that are both visionary and feasible. To achieve this, we work together with well-known, independent institutes from all over the world.

### Well thought-out in every detail

We supply a wide range of products. But we never compromise on quality. And this isn't always easy. Because each species of animal has its own special needs. Each age requires its own nutritional concept. And each climate zone demands specific adaptations in order to deliver professional animal nutrition.

### Highest standards

Our products and solutions are researched, developed and produced in Germany to meet the industry's highest quality standards. Biochem is certified in compliance with GMP+, ISO 50001 (energy management), ISO 9001 and HACCP.

### Tailored to your needs

Meeting your operational requirements is something we take very seriously. From 50 g sachets to the 1000 kg big bag, 100 ml bottle or 1000 liter IBCs, we give you the flexibility you need. State-of-the-art warehouses and production systems ensure maximum hygiene, safety and efficiency. This enables us to spontaneously react to your specific production requirements at any time.

### At the forefront worldwide

We have gained the necessary knowledge through decades of hard work. And we use this knowledge on a global scale because our quality standards apply worldwide. We constantly analyze every animal species, every product and every form of application. This is our way of ensuring you get the solutions you need.

*„Knowledge is everything when it comes to developing better products. That's why we invest a great deal in our research.“*

Dr. Heiko Greimann,  
CEO, Research & Development

# Locally rooted, globally networked.

The town of Lohne in Lower Saxony has been our home since 1986. But the issue of animal nutrition is not local, it's global – and as innovation drivers, this is something we are committed to. That's why we operate worldwide – in Africa, Asia, South America and Europe.

## Our hometown: Lohne

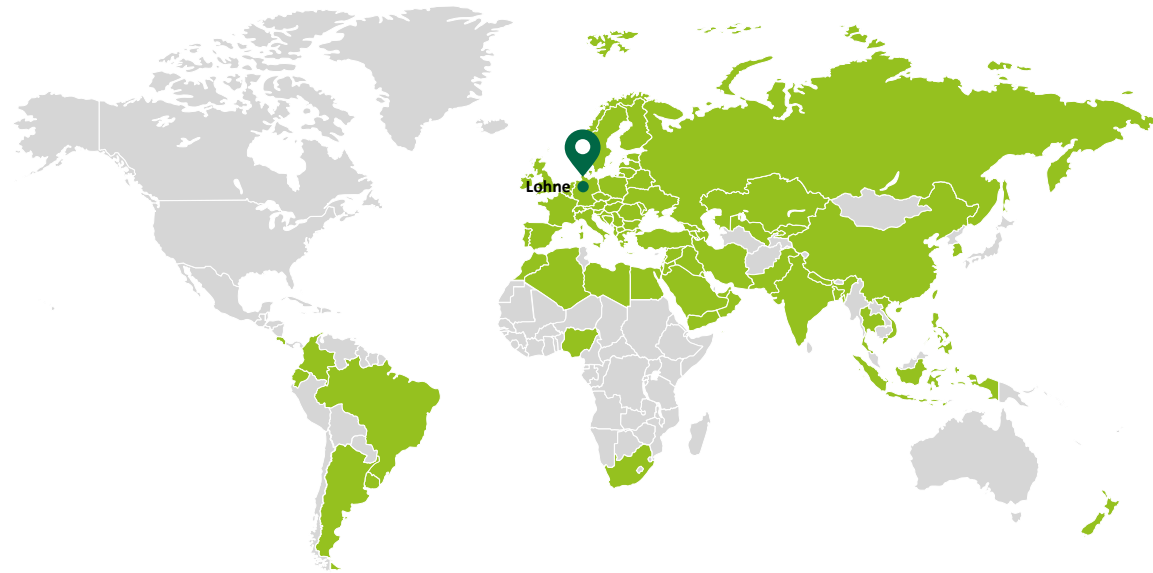

Biochem headquarters are located in the northwest German town of Lohne, Lower Saxony. More than 180 employees dedicate their knowledge and skills in our development, production, registration, marketing, logistics, and sales departments.

Our products are supplied from Lohne to more than 60 countries across the globe. This is a logistical and administrative tour de force that wouldn't be possible without our international staff. Fifteen different languages are spoken at our headquarters. And this helps us stay in close contact with our customers worldwide.

## Our home: The world

We operate globally with more than 50 retail partners and 13 subsidiaries on four continents. From Poland and Russia, to Iran, the Philippines and Brazil, we work with regionally specialized teams that understand local conditions and ensure we are always available on-site.

At Biochem, thinking globally means that our specialists travel, experience and understand the different regions. This is our way of making sure knowledge is openly shared between our teams, cultures, branches, customers and partners worldwide.

*„We see ourselves as global neighbors, strongly rooted in Lohne, but personally available on site for our customers worldwide. And this makes us feel proud.“*

Paulo Ricardo Lima de Oliveira, Regional Sales Director, America
